

SDG 7 : ENSURE ACCESS TO AFFORDABLE, RELIABLE, SUSTAINABLE AND MODERN ENERGY FOR ALL

KEY ISSUES AND OBJECTIVES TO WHICH LEGRAND CONTRIBUTES

Electricity access

7.1 By 2030, ensure universal access to affordable, reliable and modern energy services

Since 2007, Legrand and its partner Electriciens sans frontières have developed more than 250 projects in 43 countries to **provide access to electricity for those who need it**. In total, 2.9 million people have benefited from access to electricity. The projects are designed for the long term, to ensure reliable and secure access to electricity.

Electricity availability and reliability

7.2 By 2030, increase substantially the share of renewable energy in the global energy mix

In 2021, 100% of the electricity bought by Legrand in Italy and 26% in France came from renewable sources, thanks to specific contracts (such as Power Purchase Agreements - PPA). Legrand intends to step up these commitments so that 70% of the electricity bought by the Group comes from renewable sources and 25% of its sites produce **renewable electricity** by 2024. Solar and geothermal energy already supplies production sites in China and Hungary.

Renewable energy

7.3 By 2030, double the global rate of improvement in energy efficiency

Legrand is helping to **improve the energy efficiency of the buildings** equipped with its products. By offering energy efficient products and services to its customers, Legrand has helped avoid the emission of 13.2 million tons of CO2 since 2014. Legrand has reinforced its commitments in North America by participating in the Better Building, Better Plants initiative, renovating buildings and offices and reducing their emissions.

Energy efficiency

7.3.1 Energy intensity measured in terms of primary energy and GDP

Energy efficiency principles are implemented during construction, refurbishment and maintenance projects at the Group's sites.

Infrastructure investments
