

SDG 7 : ENSURE ACCESS TO AFFORDABLE, RELIABLE, SUSTAINABLE AND MODERN ENERGY FOR ALL

7 AFFORDABLE AND CLEAN ENERGY

KEY ISSUES AND OBJECTIVES TO WHICH LEGRAND CONTRIBUTES

ELECTRICITY ACCESS

ELECTRICITY AVAILABILITY AND RELIABILITY

7.1 By 2030, ensure universal access to affordable, reliable and modern energy services

Since 2007, Legrand and its partner Electriciens sans frontières have developed over 288 projects in 46 countries to provide access to electricity for those who need it. Overall, 3.4 million people have benefited from access to electricity. The projects are designed for the long term, to ensure reliable and secure access to electricity.

7.2 By 2030, increase substantially the share of renewable energy in the global energy mix

Legrand has stepped up its commitment to renewable energy and now consumes 83% renewable electricity. By installing photovoltaic panels on 28 of its production sites, Legrand is increasing the proportion of renewable energy in its energy mix, and is already producing more than 7GWh of renewable electricity. In 2024, Legrand announced its adherence to RE100, with the aim of achieving 100% of electricity from renewable sources by 2030.

7.3 By 2030, double the global rate of improvement in energy efficiency

Legrand helps to improve the energy efficiency of the buildings it works on. By offering energy-efficient products and services to its customers, Legrand and its products have prevented the emission of almost 14.8 million tonnes of CO2 since 2022. Legrand has reinforced its commitments in North America by participating in the Better Building, Better Plants initiative, renovating buildings and offices and reducing their emissions.

7.3.1 Energy intensity measured in terms of primary energy and GDP

Energy efficiency principles are implemented in the Group's construction, renovation and maintenance projects.
