

LEGRAND WAY FOR ECO-DESIGN

Basic practices

Risk assessment for presence of hazardous substances

Acknowledgement of Products Group environmental requirements

Evaluation practice

Use of LCA (Life Cycle Analysis) in the concept definition phase of a product

Management practices

Determine significant environmental aspects of products

R&D with an Environmental Management System (ISO 14001-V2015)

Integration of the upstream supply chain into the LCA

Advanced practices

Improvement of the upstream supply chain

Design Packaging utilizing sustainability best practices

Design of products that perform within a circular economy
